

华附面试口语 2026 年 5 月最新版

一、考试形式：辩论（此形式为2026年4月考情安排，仅供参考，5月场以校方通知为准）

人数：4 人/5 人一组

考试形式：看一篇文章，后每个人 3 分钟陈述，发言环节是 4 个人轮流来；发言环节不能抢开头,有固定顺序；陈述后然后进行 8 分钟 4 人小组辩论

二、辩论完整流程（Debate Structure）+功能句

Debate Stage 辩论阶段	Useful Sentences
Reading & Preparation 阅读与准备	The main issue here is whether... 或 This topic mainly focuses on...
Opening Statement 开场立论	From my perspective, I strongly believe that... 或 Personally, I support the idea that...
Giving Reasons 陈述理由	The main reason is that... 或 Another important point is that...
Giving Examples 举例论证	For example, many students nowadays... 或 A good example can be seen in...
Adding Ideas 补充观点	Another important aspect is... 或 In addition to that...
Agreeing 同意观点	I completely agree with your point. 或 That's a very reasonable argument.

Partial Agreement 部分同意	I agree to some extent, but... 或 I understand your opinion; however...
Disagreeing Politely 礼貌反驳	I respectfully disagree with your opinion. 或 That may be true, but we should also consider...
Rebuttal 反驳观点	Your argument overlooks the fact that... 或 The problem with this idea is that...
Interrupting Politely 礼貌打断	Sorry to interrupt, but... 或 May I briefly respond to that point?
Asking Questions 提出反问	But is that really practical for ...?
Developing Discussion 推进讨论	We should also consider the long-term impact. 或 Let' s look at this from another perspective.
Refocusing on the Debate 拉回主题	I think the key issue here is... 或 The discussion should focus more on...
Responding to Others 回应他人观点	I' d like to respond to your earlier point. 或 What you mentioned reminds me of...
Conclusion 总结陈词	Overall, I still firmly believe that... 或 The advantages clearly outweigh the disadvantages.

三、一对一课程教学内容

1. 适合下面 15 题的万金油素材（学生需熟练背诵）：

万能素材（动词短语）	适合题目
improve learning efficiency 提高学习效率	1 / 4 / 6 / 8
think independently 独立思考	1 / 3 / 6
rely too heavily on technology 过度依赖科技	1 / 3 / 5 / 6
develop critical thinking 培养批判性思维	1 / 3 / 4 / 6
reduce screen time 减少屏幕使用时间	3 / 4 / 5
compare themselves with others 与他人比较自己	5 / 7 / 9
build self-confidence 建立自信心	5 / 7 / 8 / 9
relieve academic pressure 缓解学业压力	7 / 8 / 9 / 10
maintain mental well-being 保持心理健康	5 / 7 / 8 / 9 / 10
achieve personal growth 实现个人成长	8 / 9 / 10 / 12 / 13
balance study and leisure 平衡学习与休闲	7 / 8 / 9 / 10 / 14
broaden personal horizons 开阔个人视野	10 / 12 / 14
develop practical life skills 培养实际生活技能	12 / 13
strengthen social responsibility 增强社会责任感	12 / 13 / 15
participate in volunteer activities 参加志愿活动	10 / 12 / 15
protect the natural environment 保护自然环境	15

reduce environmental pollution 减少环境污染	15
encourage face-to-face communication 鼓励面对面交流	4 / 5 / 9
spread false information 传播虚假信息	2 / 5
form healthy habits 养成健康习惯	3 / 7 / 8 / 13 / 15
improve communication skills 提升沟通能力	9 / 10 / 12 / 14
develop problem-solving skills 培养解决问题能力	6 / 10 / 13
stay motivated and productive 保持积极性与效率	7 / 8 / 9 / 10
reduce feelings of anxiety 减少焦虑感	5 / 7 / 8 / 9
create unrealistic expectations 制造不切实际的期待	5 / 14
gain real-life experience 获得真实生活经验	10 / 12 / 13
prepare students for the future 为未来做好准备	1 / 4 / 10 / 13
improve self-discipline 提升自律能力	3 / 4 / 7 / 13
make responsible decisions 做出负责任的决定	2 / 5 / 12 / 15
encourage creative thinking 鼓励创造性思维	1 / 4 / 6 / 14

2. 一对一课程教学题目

第一部分：网络、科技与数字生活

1. AI 作业与学术诚信

Since the release of advanced AI tools such as ChatGPT, more students have started using artificial intelligence to complete homework, write essays, and prepare school projects. Some schools around the world have even reported cases where students submitted AI-generated assignments without doing independent thinking themselves. Supporters believe AI can improve efficiency and help students learn more effectively, especially when used responsibly. However, many teachers worry that overreliance on AI may weaken students' creativity, writing ability, and academic honesty. As AI technology develops rapidly, schools are facing growing challenges in balancing innovation and academic integrity.

Debate Topic

Should schools impose stricter rules on students' use of AI for schoolwork?

2. Deepfake 技术与网络安全

In recent years, deepfake technology has become increasingly advanced. By using artificial intelligence, people can now create highly realistic fake videos and audio recordings that are difficult to distinguish from real ones. While some creators use deepfake technology for entertainment and filmmaking, others have used it to spread misinformation, damage reputations, or create online scams. Governments and technology companies are now discussing how to regulate deepfake content without limiting creativity and freedom of expression. Many people are especially concerned about the impact of fake online content on teenagers and society.

Debate Topic

Does deepfake technology pose a greater threat than benefit to society?

3. 短视频算法与青少年注意力

Short-video platforms such as TikTok, Reels, and Xiaohongshu have become extremely popular because their algorithms continuously recommend personalized content to users. Many teenagers spend hours scrolling through short videos every day without realizing how much time has passed. Some researchers believe these algorithms are designed to keep users addicted by constantly stimulating their brains with fast and entertaining content. Educators worry that

teenagers may gradually lose patience for deep reading, long discussions, and critical thinking. At the same time, others argue that short videos are simply a new and efficient way of receiving information.

Debate Topic

Are recommendation algorithms negatively affecting teenagers' concentration and thinking habits?

4. 数字化课堂与传统学习方式

After the COVID-19 pandemic, many schools continued introducing digital classrooms, online homework systems, and electronic textbooks into daily education. Students today can attend lessons online, submit assignments digitally, and access large amounts of educational information through technology. Supporters believe digital learning is more flexible and better prepares students for a technology-driven future. However, critics argue that excessive screen time reduces face-to-face communication and weakens students' ability to focus deeply. Some teachers also believe traditional classroom learning still provides stronger discipline and interaction.

Debate Topic

Should digital learning become the dominant form of education in the future?

5. 社交媒体与“完美生活”文化

On social media platforms, teenagers are constantly exposed to carefully edited photos, luxury lifestyles, and videos showing “perfect” appearances and achievements. Many influencers share glamorous daily routines, expensive products, and ideal body images that attract millions of followers. Psychologists have warned that long-term exposure to this type of content may increase anxiety, insecurity, and unhealthy comparison among teenagers. Some young people feel pressure to present perfect versions of themselves online in order to gain likes and attention. As social media continues shaping teenage culture, concerns about mental health are growing rapidly.

Debate Topic

Is social media creating unrealistic expectations for teenagers' lives and appearance?

6. AI 是否正在削弱学生独立思考能力

As AI tools become more powerful and convenient, many students now rely on artificial intelligence to summarize articles, answer questions, and generate ideas instantly. Some educators believe this technology saves time and allows students to learn more efficiently. However, others are concerned that students may stop thinking independently because AI can provide answers so quickly. Researchers have also warned that overdependence on AI may weaken creativity, problem-solving ability, and critical thinking skills among young people. This issue has become one of the most discussed educational debates in the age of artificial intelligence.

Debate Topic

Is artificial intelligence weakening teenagers' independent thinking ability?

第二部分：心理健康、学业压力与成长

7. 心理健康与学业成绩

In many countries, academic competition among teenagers has become increasingly intense. Students are expected to achieve high grades, participate in extracurricular activities, and prepare for future university admissions at a very young age. As a result, cases of stress, anxiety, and emotional burnout among teenagers have risen significantly in recent years. Some schools have started introducing mental health lessons, counseling services, and stress-management programs to support students emotionally. However, others believe academic achievement should still remain the main priority of schools because grades strongly influence students' future opportunities.

Debate Topic

Should schools place greater emphasis on emotional well-being rather than academic performance?

8. 学业压力与成长

Teenagers today often face heavy academic workloads, long study hours, and constant pressure from exams. In some countries, students attend school during the day and continue taking extra classes at night or on weekends. Although academic competition may motivate students to work harder, many teenagers report feeling exhausted, anxious, and emotionally overwhelmed. Parents and educators are beginning to question whether excessive pressure is harming students'

creativity, confidence, and overall happiness. Some experts argue that personal growth should include emotional development, communication skills, and hobbies instead of focusing only on grades.

Debate Topic

Is academic pressure becoming the biggest obstacle to teenagers' personal growth?

9. “躺平文化”与青少年竞争压力

In recent years, the term “lying flat” has become widely discussed among young people in many Asian countries. Some teenagers and young adults feel exhausted by intense academic competition, social expectations, and pressure to constantly succeed. As a result, some people choose a slower and less competitive lifestyle, focusing more on personal happiness and mental well-being. Supporters believe this attitude helps reduce stress and protects mental health. However, critics argue that giving up ambition too early may reduce motivation and negatively affect personal growth and future development.

Debate Topic

Is the “lying flat” attitude harmful to teenagers' future development?

10. Gap Year 与 “慢节奏成长”

More students around the world are considering taking a “gap year” before entering university. During this time, some choose to travel, volunteer, work part-time, or explore personal interests instead of continuing formal education immediately. Supporters believe a gap year helps teenagers gain life experience, reduce stress, and better understand their future goals. However, critics worry that students may lose motivation for study or fall behind academically. As modern education becomes increasingly competitive, society continues debating whether slowing down for personal growth is truly beneficial for young people.

Debate Topic

Should teenagers be encouraged to slow down and explore life beyond academics?

11. 学校与心理健康责任

In recent years, teenage mental health problems such as anxiety, depression, and emotional stress have received growing public attention. Many students spend most of their time at school,

where academic pressure and social relationships strongly affect their emotional well-being. As a result, some schools have introduced counseling rooms, mental health education, and emotional support programs. However, others argue that mental health should mainly be the responsibility of families and individuals rather than schools. The debate continues as society tries to find better ways to support teenagers' emotional development.

Debate Topic

To what extent should schools be responsible for students' mental health?

第三部分：校园教育与社会责任

12. 社区服务与社会实践

More schools around the world are encouraging students to participate in volunteer work and community service activities. Some students visit nursing homes, join environmental projects, or help organize local charity events. Supporters believe these experiences help teenagers develop responsibility, communication skills, and a stronger understanding of society. However, critics argue that forcing students to participate may reduce their genuine interest in helping others. Some people also believe students are already under enough academic pressure and should not be required to complete additional social tasks.

Debate Topic

Should community service and social practice become compulsory parts of secondary education?

13. 校园劳动教育回归

Many schools have recently started paying more attention to labor education, encouraging students to participate in activities such as cleaning classrooms, cooking, gardening, and community service. Educators believe these activities help students develop responsibility, independence, and practical life skills. However, some parents argue that students are already under heavy academic pressure and should spend more time focusing on their studies instead of doing physical labor. As modern education increasingly emphasizes all-round development, society continues debating whether labor education should play a larger role in schools.

Debate Topic

Should labor education become a more important part of secondary school education?

第四部分：娱乐文化与青少年消费

14. 演唱会与文旅经济热潮

In recent years, large concerts, music festivals, and live performances have become increasingly popular among young people. Many cities now organize major entertainment events to attract tourists and boost local economies. Teenagers often travel to different cities to attend concerts of their favorite singers or bands, spending significant amounts of money on tickets, transportation, and merchandise. Some people believe these activities help young people relax and support cultural industries. Others argue that teenagers may become overly obsessed with entertainment consumption and ignore more meaningful personal goals.

Debate Topic

Do large entertainment events bring more benefits or drawbacks to teenagers?

15. 环保行动与学生责任

As environmental problems become more serious worldwide, many schools have started encouraging students to participate in environmental activities such as garbage sorting, recycling programs, and volunteer projects. Some people believe teenagers should actively take part in protecting the environment because small daily actions can create long-term positive change. However, others argue that students should focus mainly on their studies, while governments and large companies should handle environmental issues instead. This debate reflects different opinions about the role teenagers should play in solving global environmental problems.

Debate Topic

Should teenagers spend more time participating in environmental protection activities?
